PROTECTED "C" CLAMP

The load-carrying compression sleeve polices against weld spatter and damaged threads. Top bearing eliminates bent screws. Cannot "walk," therefore clamping action is effective on the very edge of material.

The World's Finest "C" Clamps for 15 Years

Why you're 7 times better off using Havens Protected "C" Clamps . . .

High tensile strength — will stand abuse.

Phosphor bronze bearing insures easy turning.

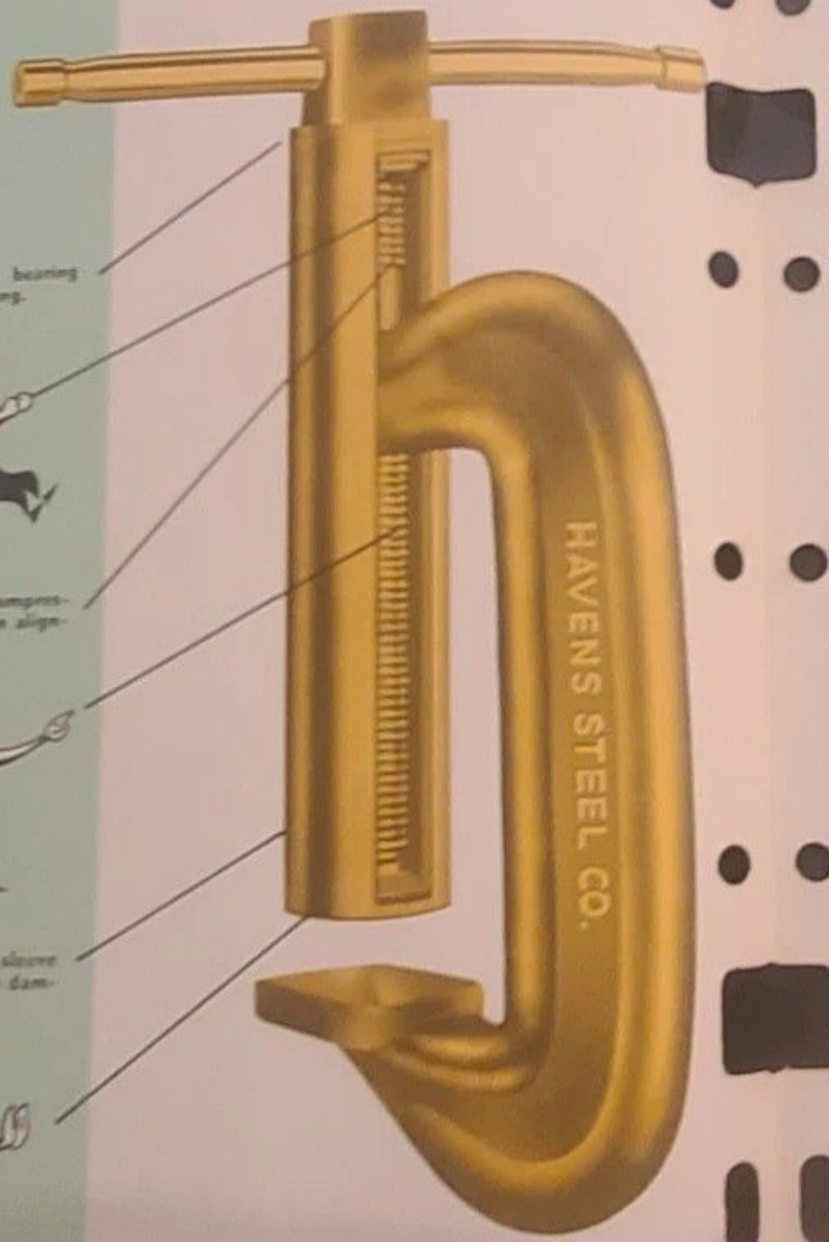
Screw above top of clamp always in tension — prevents bending of screw.

Long guide keeps compression sleeve always in alignment.

The screw NEVER takes stress below top of clamp. It cannot buckle nor bend.

Strong compression sleeve protects threads from damage.

This end cannot turn — prevents "walking."



Every part of Havens Protected "C" Clamp is engineered and tested for extreme durability. No more twisted threads from sloppy handling. Phosphorbronze Bronze bearing prevents bent handles caused by hard turning due to galling. No bent screws because of "walking" of swivel on work. No ruined threads from weld splatter.

Dependability is assured as each clamp is individually tested to a pressure slightly short of yield point. Conclusive fatigue tests are also made. Metal in the "C" section is closely controlled by periodical laboratory tests.
